## APPLICATION & REDUCTION:

Intrepid's Acrylic Urethane coating may be applied by brush, roll or airless spray application. For spraying, use as is or with minimum thinning. A pad applicator is recommended for application of clear to floors to prevent air bubbles from forming in the film. If enhanced durability is desired, catalyst addition of catalyst is recommended. Pre-thin with one pint of water per gallon. Then catalyze at a ratio of 16 parts Acrylic Urethane Varnish to 1 part of catalyst. Pre-thinning of the Acrylic Urethane Varnish before addition of catalyst is critical, as failure to pre-thin will result in loss of gloss and coagulation of the polymer.

## SURFACE PREPARATION:

Surface must be clean, dry and free of all contamination before application.

## WOOD:

Surface must be clean and free of all oil, grease and foreign material. Badly worn or rough wood should be sanded smooth and then cleaned with a tack rag.
