

# TECHNICAL DATA SHEET

TECHNICAL DATA SHEET  
10% POLYURETHANE ACCELERATOR  
100V07

## PRODUCT DESCRIPTION:

Intrepid's 100V07 is a polyurethane accelerator catalyst designed specifically for two component polyurethane coatings.

## MIXING DIRECTIONS:

Mix in 1/2 - 1-1/2 ounces of 100V07 per gallon of admixed polyurethane.

Intrepid's 100V07 polyurethane accelerator is recommended for use in decreasing the cure time of two-component polyurethane coatings. Caution must be used in addition of this product, as pot life can be significantly reduced resulting in catalyzation of the coating in spray lines and on painting tools. It is strongly recommended to use the minimum or below minimum amount to check working pot life of product. Pot life is affected with addition of accelerator as well as ambient temperature, humidity, and heat generated by spray equipment.

## PRECAUTIONS:

CONTENTS ARE FLAMMABLE.

USE WITH ADEQUATE VENTILATION

KEEP FROM HEAT, SPARKS AND FLAME.

READ MSDS BEFORE USE.
